

Postpartum Depression

Prajanika
A mother after pregnancy

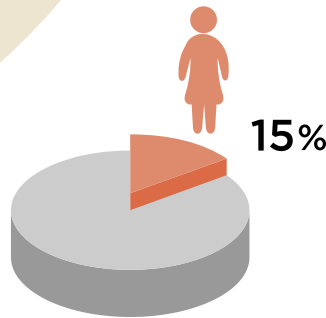

Global Facts and Figures

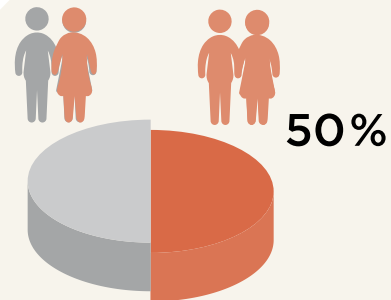

75%

3 out of 4 women
experience baby blues

Every 1 in 7 women experience
PPD

15%

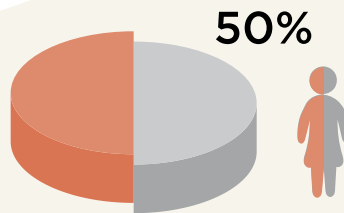

50%

1 in 2 men whose
partners have PPD may
go on to **develop**
depression-like symptoms

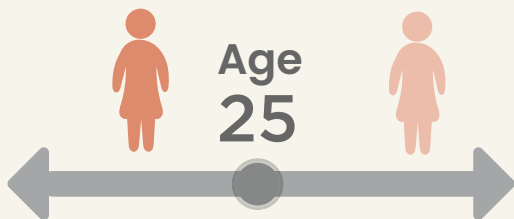

Four out of five women **recover**
from PPD completely

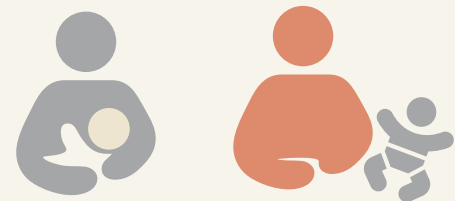

50%

Half of the women suffering PPD
remain **undiagnosed** by
doctors or healthcare professionals

Mothers <25 years have
comparatively **higher**
chances of developing PPD

Breastfeeding mothers have
lower risk of PPD compared to women
not breastfeeding

Women suffering from **poverty, migration, extreme stress, exposure to violence, emergency and conflict situations, natural disasters, and low social support** remain at higher risks of developing depression symptoms
