

3. Awareness and Training

- **Training Healthcare Workers:**
Nurses, midwives, and doctors should receive specialized training to recognize and address postpartum depression.
- **Public Awareness Campaigns:**
Hospitals can run educational programs to reduce stigma and encourage mothers to seek help.

4. Holistic Care Approach

- **Postpartum Home Visits:**
Healthcare systems can implement home visits by nurses or counselors to check on new mothers.
- **Lifestyle Guidance:**
Doctors can advise on nutrition, sleep, and exercise, which significantly impact mental health.

5. Helplines and Digital Support

- **24/7 Helplines:**
Establishing mental health helplines ensures immediate support for struggling mothers.
- **Telemedicine Services:**
Virtual consultations can make mental health support more accessible, especially in remote areas.
